Downward pressure across fixed income markets in December

Markit iBoxx fixed income monthly market monitor

Activity calendar

QE Fed tapering determines market direction

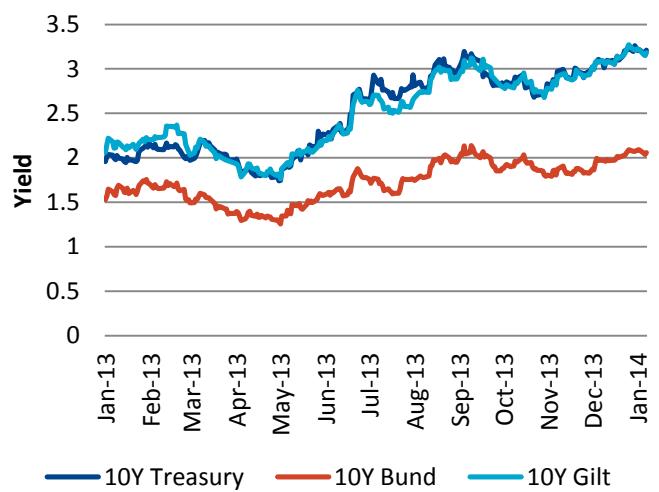

- **Negative pressure on returns** - December was a negative month for fixed income assets across three major regions, Europe, UK and the US. Markit iBoxx €, £ and \$ Overall respective indices returned -0.46%, -0.58%, -0.55%.
- **Fed moves by beginning to reduce purchases** - On December 18th the Federal Reserve Chairman Ben Bernanke announced that the central bank will reduce its purchases of Treasuries and MBS from \$85bn to \$75bn a month. The Fed chairman also indicated that the market can expect purchases to be cut by a similar amount each month over the course of 2014. On the other hand, enhanced forward guidance was introduced – fed funds rate to be kept close to zero well past the time that unemployment reaches 6.5%, the previously discussed threshold. The announcement followed the positive employment report for November - the unemployment rate fell from 7.3% to 7.0%, despite a 455,000 rise in the labour force, as the household survey reported an 818,000 increase in total employed.
- **Steepening yield curve** - The Fed announcement caused an upward shift in the US yield curve, with the 10-year Treasury yield standing at 3.0% at the end of December, sharply higher than the low of 1.60% in May. The mid and long maturity rates jumped higher than the short-term rates, as the new forward guidance anchored the path of future short term interest rates. Consequently, the steepness of the curve rose higher as measured by the 10y-2y difference.

Market movements

Yield curves moved in tandem across the board

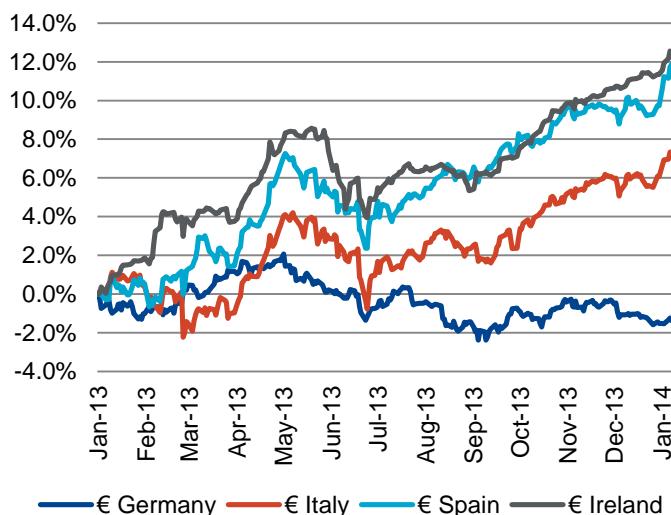

- **Yield curves highly correlated** - The benchmark yield curves in the UK and Europe followed similar

trajectories as currently there is no decoupling in long-term government bond yields. The 10-year Gilt yielded 3.0% at the end of 2013, while the 10-year German Bund yielded 2.0% at the same time.

Source: Markit iBoxx Data

- **Duration return is a key** - Unsurprisingly, duration return was the biggest contributor to the negative returns in sovereign and corporate fixed income securities. Treasuries and Gilts lost -1.10% and -1.18% for the month, on the back of raising yield curves. In Europe, the Markit iBoxx € Sovereigns index dropped -0.61% as tightening spreads in the periphery, in particular Ireland, Spain and Italy, helped offset some of the negative return coming from the core countries (Germany, France, Netherlands). Ireland's bond market had a particularly good month and 2013 overall, returning 0.67% for the month and 11.79% for the year. The spread of Markit iBoxx Ireland fell 36bps for the month (198 bps YTD) to reach 152 bps at the end of 2013, lower than that of Markit iBoxx Spain and Italy (203bps and 195bps). Ireland placed its first bond issue in January after exiting its international bailout programme a month earlier, and the strong demand for its bonds confirmed the market's faith in its fiscal finances and economic recovery.

Source: Markit iBoxx Data

- Credit spreads tightening balanced the upward shift in yield curves - Corporate fixed income securities also suffered losses due to the shift in yield curves, but the tightening of spreads helped offset some of the losses. The Fed's taper announcement in December helped confirm the confidence in the market that US recovery is on track, causing a further drop in corporate spreads. Markit iBoxx \$ Corporates lost -0.15%, with the biggest driver being duration, -1.47%, and credit, +1.01%. OAS spreads of the index decreased by 17bps to 140bps at the end of 2013. \$ Financials and \$ Non-Financials had similar losses of -0.15% as bigger negative return from Duration for Non-Financials was evenly matched by higher credit returns for Non-Financials. \$ Corporates BBB outperformed higher rated corporates due to their lower duration and larger decrease in spreads.
- In Europe and UK, corporate securities followed a similar trajectory, but sustained higher losses as the positive credit return was not big enough to match the negative duration return. € Corporates returned -0.46%, while £ Corporates returned -0.81%.
- The high yield segment was one of the few sectors in fixed income space to sustain gains in December. Markit iBoxx \$ Liquid High Yield index returned 0.48%, while iBoxx High Yield indices in Europe and UK posted positive returns of 0.62% and 1.00%, respectively. The positive return in the high yield segment can be attributed to the lower duration of the asset class and larger spreads compression.
- Inflation-linked securities were one of the worst performers during the month and YTD. Markit iBoxx \$ TIPS Inflation-linked index lost -1.24% for December and -10.23% YTD, while € Germany Inflation-linked index lost -0.90% for the month and -4.60% YTD. Inflation in the US and Europe in 2013

was lower than expected and investors in inflation-linked securities were wrong-footed for 2013.

ETF Market Activity Review

Annual fixed income ETF investment trends

- Europe had a strong year - The European fixed income ETF industry had a strong year in 2013, attracting \$10.9 billion of new flows. The US fixed income ETF industry gathered close to \$11.0 billion even though it is over three times bigger than the European equivalent.
- European ETF market still focused on government debt, not so the US - Investment trends were distinctly different, with European ETF investors buying back into European government benchmarked ETFs (\$9.4 billion) over 2013, while US based investors sold out (\$2.8 billion) of US government benchmarked ETFs.
- Broad market sentiment improved throughout the year while rates remained low. This led to broad market benchmarked fixed income ETFs in the US and Europe attracting \$8.0 billion and \$1.3 billion, respectively. Money market benchmarked ETFs in Europe – an asset class that does not exist in an ETF wrapper in the US – lost close to \$2.5 billion.
- Loans ETFs had a good run in 2013 - Leveraged loans was a big success story in the US during 2013, with loan benchmarked ETFs attracting \$5.7 billion of inflows. In Europe the asset class is still undeveloped as loan covenants prevent the publication of loan prices and hence make it impossible to construct an index.
- High yield benchmarked ETFs continued to attract interest on both sides of the Atlantic, with US investors channelling \$4.8 billion of new money and European domiciled high yield ETFs taking in \$2.5 billion.
- Consistent with the declines we have observed across the US inflation linked asset class, US ETF investors withdrew \$6.0 billion, making it the largest outflow from any fixed income asset class in the US. European investors withdrew \$556 million out of inflation linked benchmarked ETFs.

December fixed income ETF investment trends

- ETF inflows during December reflected wider market movements. The European fixed income ETF market attracted net \$900 million of assets, with the majority going to sovereigns (\$723 million) and high yield (\$437 million). In the US, fixed income ETFs experienced net outflows of \$334 million. The sectors with the biggest outflows were inflation (\$567 million),

money market (\$508 million), and preferred stock (\$501 million), while the sectors that attracted assets were broad market (\$1,245 million) and corporates (\$445 million).

New ETF Launches over December

- **Interest rated hedged products continue to evolve in the US** - December was a relatively quiet month in terms of new fixed income ETF launches. We observed launches in the US, where Wisdom Tree

issued four new ETFs in the High Yield and Corporates space with zero and negative duration. iShares also launched the iShares Liquidity Income ETF based on US corporates.

- The Wisdom Tree launches reinforce the popularity of interest rate hedged products during 2013, but they go a step further in that they offer negative duration exposure. Most 2013 ETF issuance in the duration hedged space targeted zero duration.
