Issue 1, February 2014  
 Data as of January 31st 2014

# Flight to safety sees demand for core sovereign bonds

## Markit iBoxx fixed income monthly market monitor

### Activity calendar

#### Fed continues to taper despite poor job figures and EM turmoil

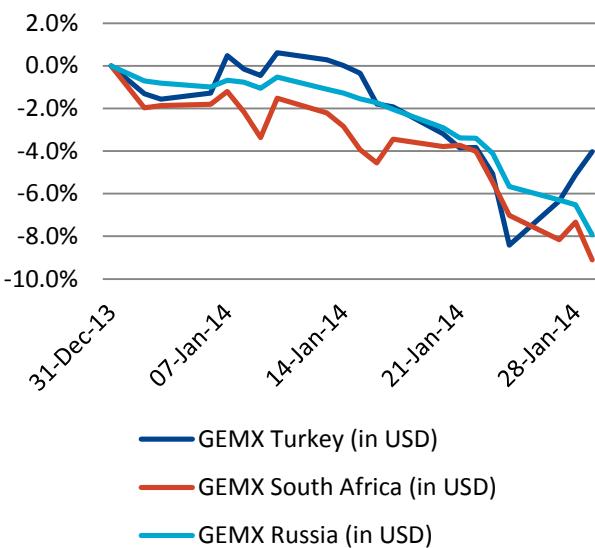

#### Fed cuts another \$10bn of bond purchases

- The Fed announced in its January meeting that it would continue its path of reducing bond purchases by another \$10bn to \$65bn a month.
- This is in line with Chairman Bernanke's initial guidance of \$10bn reduction each month and a complete halt of the QE programme by the end of 2014. The announcement confirmed that the central bank still expects that the US economy will grow strongly this year, despite the weak jobs report in January and the sharp selloff in emerging markets.
- Jobs figures were well below expectations in January with 74K added in nonfarm payroll employment (196K expected). The unemployment rate, however, still fell from 7 per cent to 6.7 per cent, as nearly 350,000 people dropped out of the labour market, taking the participation rate down to the lowest level since the 1970s.

#### Treasuries post strong gains as investors turn risk off

- US Treasuries had a strong month in January, returning 1.71% on the back of renewed interest in core sovereign fixed income assets.
- Global risk appetite is subdued as investors worry about the prospects of slowdown in Chinese economy and an increased pressure on some emerging market currencies. The introduction of QE tapering and the rise in US rates have had negative effects on emerging market countries with strong imbalances in their current accounts.
- As the rates in the US have risen sharply since their lows in May 2013, emerging market assets are no longer offering high enough yield in order to attract portfolio flows. Therefore, the Turkish lira, South African real and the Russian rouble have undergone serious selloff in the last month. The chart below represents the performance of local currency

sovereign bond markets in USD terms of the three countries for January

Source: Markit iBoxx Data

- By continuing to reduce the amount of bond purchases, the Fed has signalled that it is currently focused primarily on developments in the US economy. However, if the reduced monetary support hurts growth in emerging economies, it could feed back into a weaker expansion for the US and alter Fed's decisions later this year.

#### Yield curves shift down across major currencies

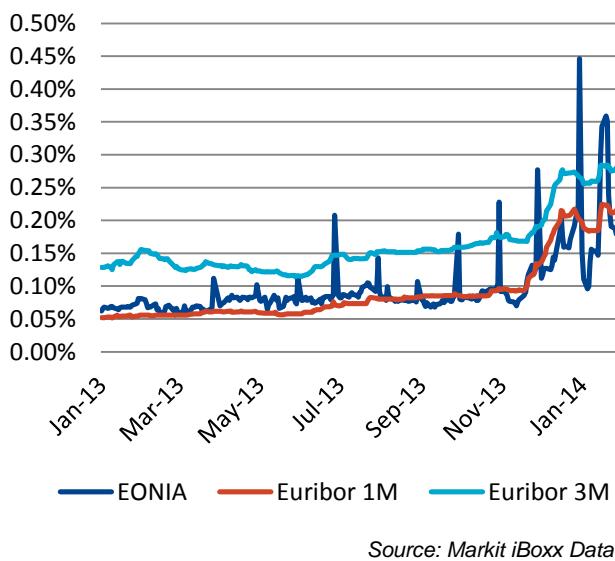

- The US yield curve shifted lower across all the maturities but the ones that sustained the biggest decreases were long term rates. The 10y US yield contracted by 35 bps to finish the month at 2.70%.
- Therefore, the asset class that was recently avoided by investors, namely long dated government bonds due to their high duration, sustained the highest gains. The Markit iBoxx \$ Treasuries 15+ index returned 6.31% for the month. The yield curves in EUR and GBP moved in tandem with the one in the US, triggering positive returns in long dated government bonds in Germany and UK as well. The

Markit iBoxx £ Gilts 15+ and £ Germany 15+ gained 3.08% and 3.51%, respectively.

- The strong gains of long dated government bonds can be partially attributed to pension plans rebalancing their portfolios. After the high returns in equity markets during 2013 (S&P 500 returned 30%), pension funds are locking in their improved funding ratios by moving out of equities and into fixed income. As the liabilities of pension plans usually span long into the future, long maturity government bonds serve as a good hedging tool in their asset liability management process.

#### ECB and BOE keep rates unchanged

- At the January meeting, ECB President Mario Draghi announced that the monetary policy committee decided to leave rates unchanged at 0.25% for the main refinancing rate, 0.50% for the lending facility and 0.00% for the deposit facility.
- Mr Draghi also commented that the central bank may act more aggressively upon two scenarios: tightening of short term rates and worsening outlook for inflation. Recently there has been a sharp rise in short term money market rates in Eurozone as can be seen on the graph:

- The increase in rates can be explained to a degree by the decreasing liquidity caused by the repayment of ECB LTRO loans taken out by banks between 2011-2012 to weather the Eurozone crisis. At the time the ECB pumped more than €1tn of cheap money into the financial system under its long-term refinancing operation.
- Bank of England also decided to maintain the Bank Rate at 0.5% and keep the stock of asset purchases at £375 billion. The decision preceded the release of inflation number for December, which showed that

price pressure is subsiding rather than growing. The CPI growth came in at 2% (median forecast 2.15%), reaching BOE target for first time since Nov 2009. The release of unemployment figures showed the jobless rate dropping to 7.1% from 7.4%, getting dangerously close to the 7% threshold announced by BOE. In order to avoid speculation about possible early tightening, Mark Carney, governor of Bank of England, reiterated at World Economic Forum in Davos that the 7% was merely a threshold, not a trigger. We can expect more clarity of the forward rate guidance by Mr Carney at the next BOE meeting in February.

#### Market movements

##### Duration return is a key

##### Corporates gain healthy returns

- Similar to December, duration return was a key driver for returns in fixed income markets in January. \$ Corporates returned 1.53% in January, with duration contributing 181 bps and credit, (-)60bps.
- Interesting to point out is the big divergence in the performance of \$ Financial and \$ Non-Financials – 1.87% and 0.99% respectively for January. The biggest driver of the difference was duration return, which contributed 215bps to \$ Non-Financials and just 126bps to \$ Financials. The main reason for that is the higher overall duration for \$ Non-Financials (7.2 vs. 4.9), and their higher exposure to long term rates.
- In the Eurozone, sovereign bond markets registered positive returns, led by Spain and Ireland (2.81% and 2.22%), which on top of positive duration return, recorded positive credit returns due to spreads tightening.
- Corporate fixed income securities in Europe gained a healthy return of 1.36% on the back of a decreasing yield curve, contributing 147 bps to total return. Credit spreads widened a bit and added (-)35bps.
- The Markit iBoxx £ Corporates AAA index, composed of 6 bonds, returned 2.37%, outperforming the 1.4% return of other rating segments. The strength can be explained by the higher duration of the AAA bonds (8.1 vs. 4.5 for Corporates overall) and, therefore, the higher duration return of 262 bps.
- In the UK, £ Corporates gained 1.98%, coming mainly from duration return, 178 bps, and coupon return, 35 bps, with credit adding (-)23bps.
- Interesting development is the divergence in credit spread movement in \$ Financial and \$ Non-Financials. Spreads moved in the opposite direction,

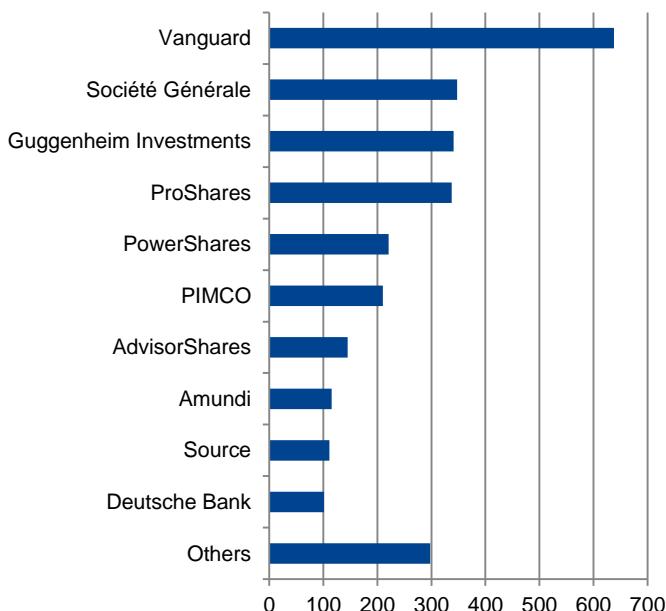

with \$ Financials spreads tightening by 6bps while \$ Non-Financials spreads widening by 3bps.

## ETF Market Activity Review

### January fixed income ETF investment trends

- The European fixed income ETF market attracted the majority of assets during January. Net flows were \$1,916 million, with the majority going to sovereigns (\$918 million), corporates IG (\$630 million) and high yield (\$79 million). In the US, fixed income ETFs experienced net inflows of \$849 million.
- Vanguard was able to attract the biggest inflows to their fixed income ETFs in January, with 640 \$mm. One of its products, The Vangaurd Total Bond Market ETF, experienced an inflow of \$764mm. Societe Generale, Guggenheim Investments and Proshares shared the second spot with roughly \$340mm each.

### Inflows to fixed income ETFs by providers for Jan (in \$mm)

### New ETF launches over January

#### Actively managed ETFs start to enter the market

- In Europe, Source launched an actively managed covered bond ETF in cooperation with PIMCO.
- iShares issued iShares Swiss Corporate Bond ETF, while Lyxor introduced two double short ETFs on US Treasury and Japan government bonds.
- In the US, the launch calendar was busier. Emerging Global Shares launched three new ETFs on emerging market corporate and sovereign bonds with three different maturity exposures.
- PIMCO issues yet another two actively managed ETFs, namely PIMCO Low Duration and Diversified Income ETFs. AdvisorShares introduced an actively managed Sage Core Reserves ETF, while Market Vectors announced the passive Short High-Yield Municipal Index ETF.
