

Markit fixed income research

Issue 6, June 2014
 Data as of May 31st, 2014

Global bond rally continues

Markit iBoxx fixed income monthly market monitor

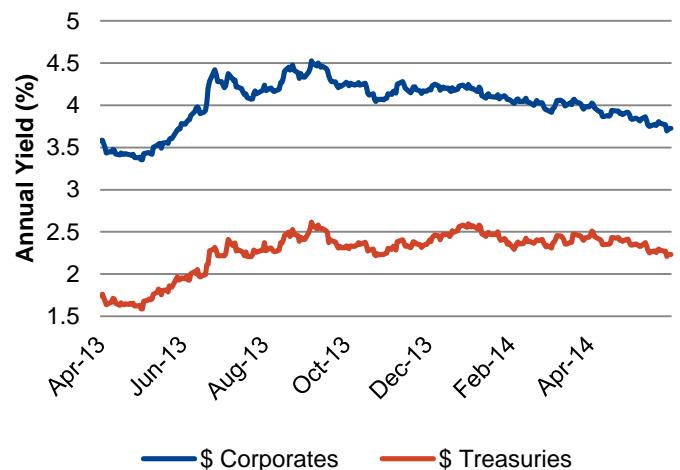

- Credit spread tightened in US amid growth in corporate revenue and earnings
- ECB triggered another round of economic stimulus
- Apart from Portugal, Eurozone peripheral countries extended the rally
- Emerging market debt starts to attract investors

from 1.7% in the beginning of this year, the lowest since 2000.

Activity calendar

It has been a very calm month for US treasury and corporates market.

- US treasury market witnessed record low volatility after Fed revised its forward rate guidance. The rally, especially in the intermediate and long end, extended to a significant magnitude. Year to date, iBoxx \$ Treasury 7-10 year, 10-15 year and 15+year returned 4.8%, 7.3% and 12.3%, respectively.
- US unemployment rate in May held at 6.3% and non-farm payroll advanced 217K. However, it is worth noting that other labour statistics did not improve in a similar fashion. The labour force participation rate, for example, has fallen to 62.8% compared to 65.7% in Jan 2009. Therefore, Fed now stresses more on the broad measure of the health of the job market instead of focusing solely on the unemployment rate. Market participants see this change as a possible relief sign from a near-term rate hike.
- Meanwhile, ECB's rate cut could also potentially bring new demand for US treasuries. However, the historical correlation between US treasuries and Eurozone sovereigns has been just 46%. As a result, rates in the US could still increase if there is clear signal of inflation or strong US economic growth.
- Credit spreads in the US narrowed as a result of improved economic activity, corporate revenue, earnings growth and an ease in lending criteria. In the past earning season, most of the S&P 500 companies reported growth in both revenue and earnings, albeit in small magnitude. The spread between iBoxx \$ IG Corporates and iBoxx \$ Treasuries tightened to 1.5%

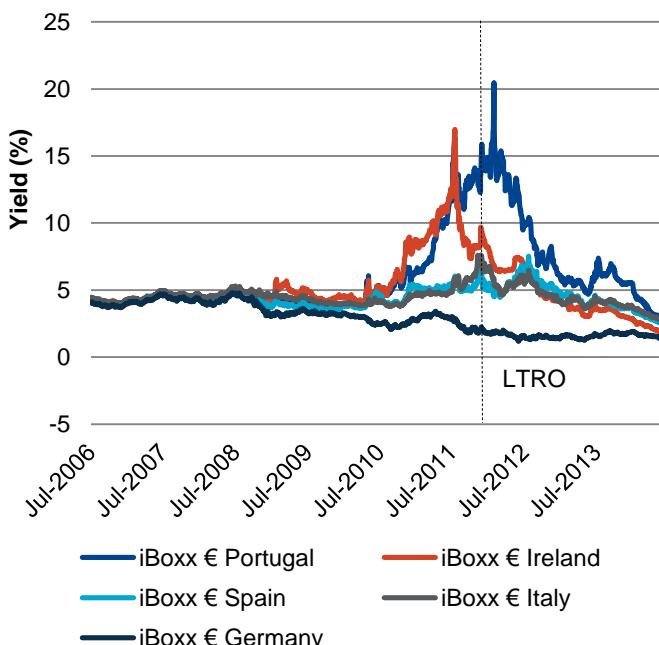

Source: Markit iBoxx Data

ECB's stimulus will make peripheral countries more competitive?

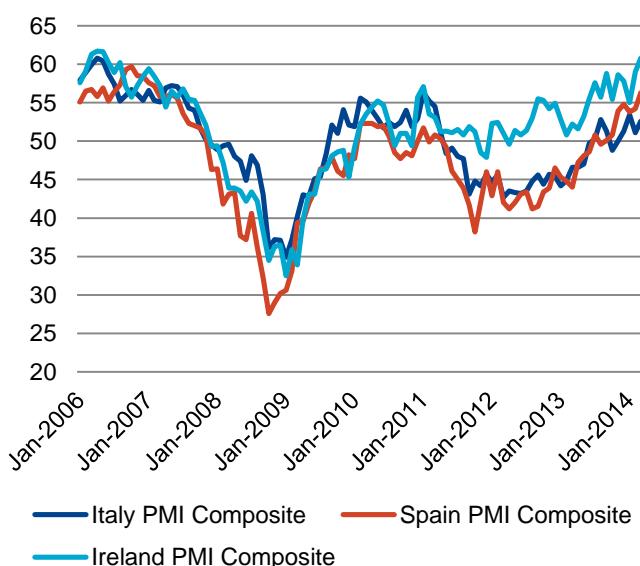

- The European Central Bank cut its main refinancing rate from 0.25% to 0.15%, the marginal lending facility to 0.40% from 0.75% and the deposit rate to negative -0.10% from 0%. Besides, the central bank also launched €400 billion bank funding program in the form of four years low interest loans. In addition, similar to Fed's asset buying programme, the ECB will purchase asset-back securities in the secondary market. The measures are likely to encourage banks to increase lending, prevent potential deflation risk and possibly weaken Euro.
- It would be interesting to see the outcome of the stimulus package on both the economic activity in Europe and yields on Eurozone sovereign bonds.

During the previous round of LTRO in 2011, the yields dropped significantly in the following two years. However, we believe there is much less room for yields to decrease in a similar fashion at this point.

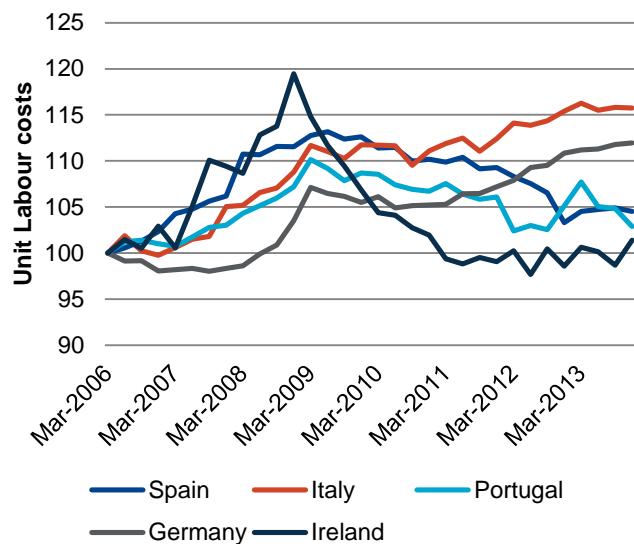

Source: Markit iBoxx Data

- Actually, there has been a significant pickup in economic activity in European peripheral countries. The Markit Composite (Manufacturing + Services) PMI numbers have been consistently above the 50 mark after the end of 2013, signalling economic expansion.

Source: Markit iBoxx Data

- Additionally, the rebalancing of the economies that is so needed in order to make the countries more competitive has finally begun taking place. The unit labour costs in Spain, Ireland and Portugal have been dropping after 2009 while those in Germany have been going up. The only exception is Italy where unit labour costs have increased throughout the period.

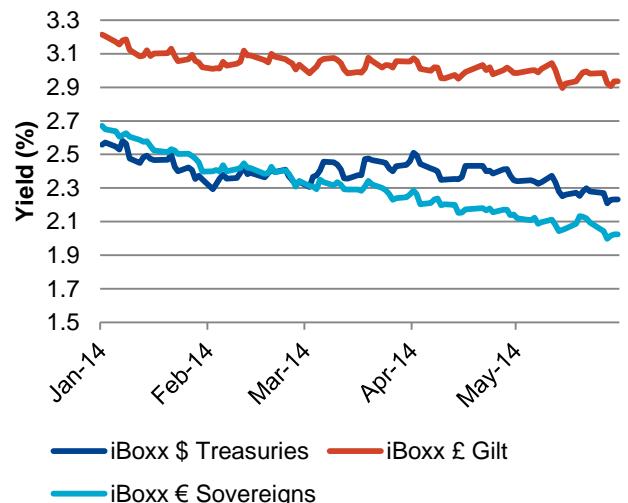

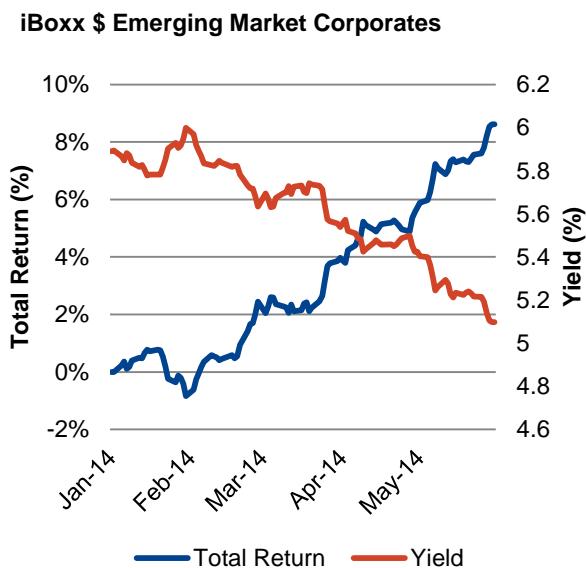

Source: ECB

- However, there are still underlying problems in the countries. Unemployment is stubbornly high, public debt is still at elevated levels and increasing, banking sector problems have not been completely resolved. Yet, Italy with its public debt to GDP ratio of 133% and unstable politics can borrow at 2.8% for a ten year period as of the middle of May. Although rated below investment grade, Portugal can refinance at 3.5% for similar maturities. Even Greece, which went through a restructuring of its debt, was able to tap the markets with a 5 year bond yielding at 6.5%. Therefore, we think that the recent drop in yields is stepping into bubble territory.

Emerging market countries see investors coming back

- Emerging market debts had a volatile year in 2013. A number of countries, such as South Africa, India, Turkey and others, suffered from significant currency depreciation due to unpreceded capital outflow. Meanwhile, political turmoil also added to the sell-off pressure.

Source: Markit iBoxx Data

- However, investors are returning to emerging market debt because of attractive risk-return profile. New elections took place in Turkey and India; current account deficit shrank in Indonesia; flash PMI and export numbers for China have started to pick up again. These positive news brought investors a glimpse of hope. In May, iBoxx \$ EM Sovereigns and iBoxx \$ EM Corporates index gained 2.90% and 2.37%, bringing the year to date return of 8.7% and 5.7%, respectively.
- Although emerging market sovereign bonds have higher yields than their developed market counterparts, the yield pick-up brings significant risks. The economies of these countries are still vulnerable to unexpected market turmoil and currency instability triggered risks might come back.

Market movements

Correlation increases; yields shifted down.

- The correlation, measured on a yearly basis, between US Treasuries and Euro Sovereigns rose significantly to 67% from 39% in April. Meanwhile, correlation between Treasuries and Gilts also elevated to 63% from 43%. This change is likely caused by expectations of ECB's stimulus package in June, which is becoming the new driver of global rates market.
- Annual yields of iBoxx \$ Treasuries, iBoxx £ Gilts and iBoxx € Sovereigns dropped, following similar patterns. However, the yield curve moved in slightly different ways. Euro yield curve had a parallel downward shift while the Treasury yield curve held on the short end and moved lower only in intermediate and long end.

- Except for Portugal, yields on Eurozone sovereigns continued their move downwards. After experiencing a 250 bps fall YTD, yields on Portuguese bonds stalled the rally and remained flat in May. iBoxx € Corporates gained 0.92%, with 8bps coming from credit return, 66 bps coming from duration return and 28 bps from calendar return.
- UK Gilts provided 0.94% return in May, slightly better than last month. Meanwhile, iBoxx £ Corporates registered a 1.35% gain with duration and credit contributing 61bps and 38 bps, respectively.
- US Treasuries and corporates both provided positive returns. iBoxx \$ Treasuries increased 1.09% and iBoxx \$ corporates surged 1.5% in May. For corporates, the biggest gain came from duration return, 109 bps.
- US inflation-linked bonds as well as UK inflation-linked bonds are starting to get investors' interest. iBoxx \$ TIPS inflation-linked index registered 2.1% gain while iBoxx £ inflation-linked index provided 1.04% return in May. In contrast, Eurozone is still struggling with disinflation. For example, iBoxx Germany inflation-linked index gained merely 0.2% for the same period.

ETF Market Activity Review

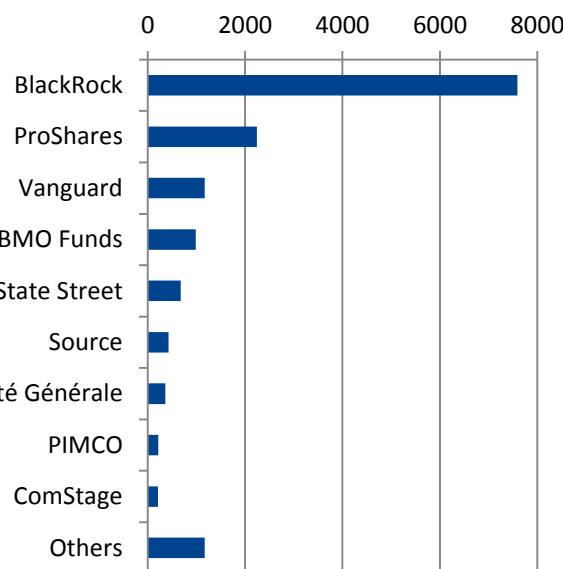

US intermediate term treasuries ETF experienced strong inflows

- USD fixed income ETFs are the biggest winners of fund inflows in May. In total, \$ 11.6 billion proceeds went to USD fixed income ETF instruments, with the majority going to US Treasuries (\$7.5 bn). Relieved from imminent rate hike, investors felt more comfortable to take on duration risk while still keeping the necessary liquidity. Besides, US Corporates IG

and High Yield ETFs gained 0.9 billion and 1.25 billion, respectively.

- Euro fixed income ETF market was relatively quiet in May. Euro sovereign ETFs attracted around \$0.93 billion fund inflow, while IG corporates and covered bond funds received \$0.6 billion and \$0.35 billion, respectively. On the other hand, high yield ETFs incurred a \$0.83 billion outflow.
- Emerging market ETFs were very popular assets for investors in May. iShares Emerging Markets Local Government Bond UCITS ETF gained \$400 million of flow. Meanwhile, iShares J.P. Morgan \$ Emerging Markets Bond UCITS ETF attracted \$188 million of new assets.

Top 10 Fixed Income ETF providers by positive inflows in May (in \$mm)

Source: Markit ETP Analytics

- BlackRock was able to attract the biggest chunk of inflows to its fixed income ETFs in May, with \$13 bn. One of its products, iShares 7-10 Year Treasury Bond ETF received 5.2 billion. Similarly, ProShares Ultra 7-10 Year Treasury ETF received around \$2 billion of new flows.

New ETF launches in May

- Similar to previous month, there were no new Euro fixed income ETF launches. Meanwhile, five new US fixed income ETF funds were launched in May.
- db X-trackers added to its portfolio the db X-trackers Solactive Investment Grade Subordinated Debt Fund. The ETF tracks the performance of subordinated and junior subordinated debt denominated in US dollars.
- PowerShares introduced the PowerShares Variable Rate Preferred Portfolio ETF, which invests in preferred stocks and hybrid securities that pay floating or variable dividends or coupons. The securities must be denominated in US dollars.
- First Trust launched the First Trust Managed Municipal ETF, which invests in intermediate and long term investment grade municipal bonds, which are exempt from federal income tax.
- iShare US launched two interest rate hedged products - iShare interest Rate Hedged Corporate Bond ETF and iShare Interest Rate Hedged High Yield Bond ETF. The funds are designed to provide protection from rising rates by taking a short position in treasury futures along with a long position in the underlying corporate bonds.
