

# 6 benefits for your reservoir engineering workflows

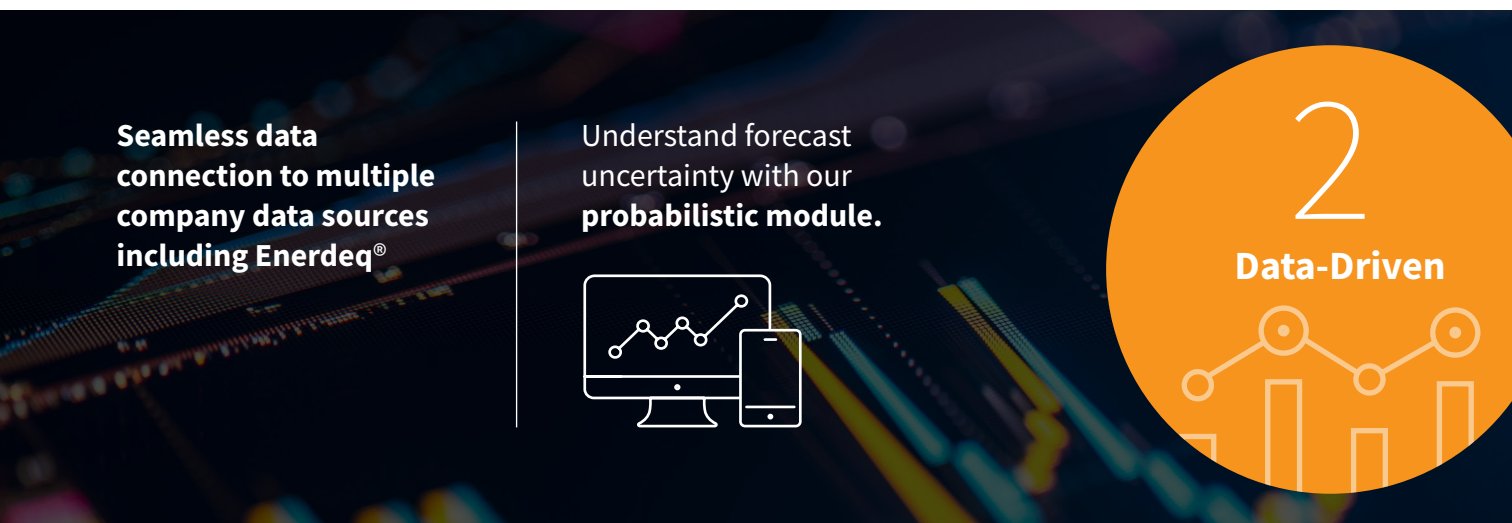

Industry leading **reserves forecasting package.**

Over **50** authored SPE papers.

**+500** companies use Harmony® for conventional and unconventional workflows.

Over **45** years experience in oil/gas consulting and software development.

The **most complete rate-transient analysis tools** on the market.

**Seamless data connection to multiple company data sources including Enerdeq®**

Understand forecast uncertainty with our **probabilistic module.**

**Data-Driven**

**Build numerical models from scratch and get results in less than an hour.**

**Smart auto-forecast** ensures fast yet reasonable estimates for scoping and valuation.

First introduced the Flowing Material Balance tool to the industry. Robust, easy-to-use platform **ready for multiphase analysis.**

Highly performant with large well counts - up to **100,000**

**Scalable, collaborative multi-user environment** suitable for large or small IT environments.

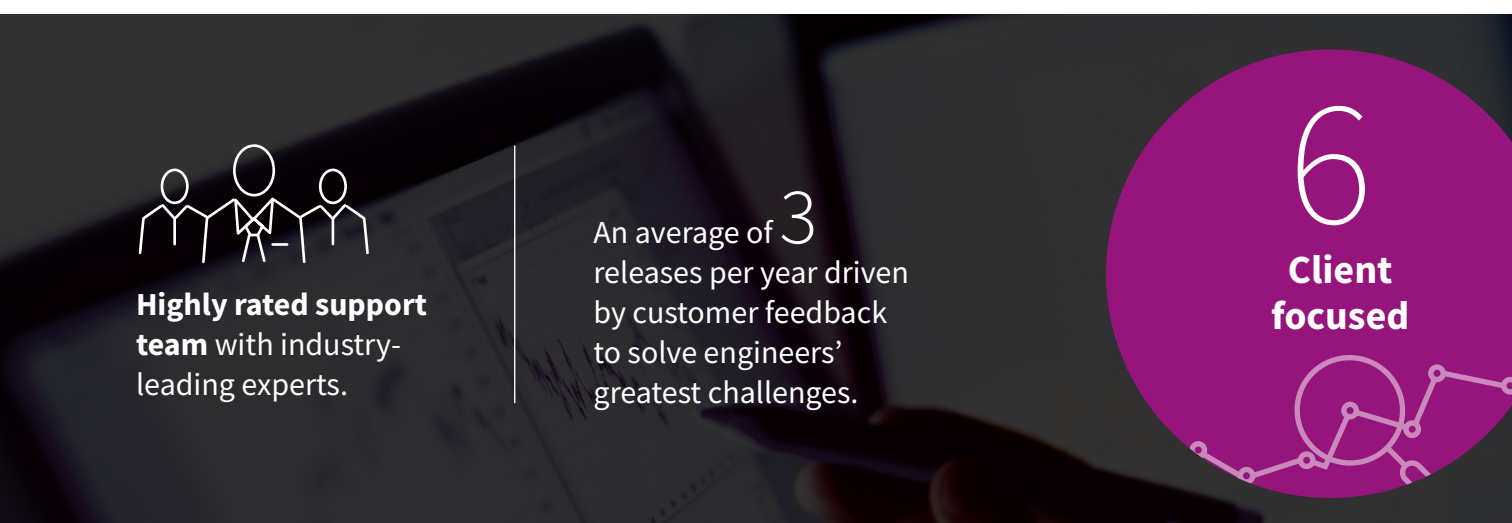

**True multi-user support** enables users to easily collaborate on project work, saving time and promoting consistency.

**Scalable**

Corporate database connections combined with **scheduled updates** ensure the latest information is always available. Your engineering time shouldn't be spent loading data.

Analysis information is centralized in SQL Server for **trustworthy data storage and centralized backups.**

**Highly rated support team** with industry-leading experts.

An average of **3** releases per year driven by customer feedback to solve engineers' greatest challenges.

**Client focused**
