# Jane's Terrorism and Insurgency Centre

Local knowledge of a global threat environment

[janes.com/jtic](http://janes.com/jtic)

# A shifting global environment

An unsettled world of shifting and evolving social, political, and economic environments is giving rise to new actual and potential threats that security organisations must detect, understand, and counter. As the alliances, aims, and operational methods of non-state actors constantly change in response to events, analysts need to understand the direction and pace of change in order to make critical decisions and create meaningful plans. Perhaps most importantly, analysts need to be able to trust the open-source intelligence these plans and decisions are based on.

# Reliable, independent, unrivalled

For more than 100 years, security organisations across the globe have trusted Jane's to deliver objective, meaningful, and actionable intelligence quickly and effectively through unmatched data and expertise.

Drawing on the global expertise of the Jane's analysts, Jane's Terrorism and Insurgency Centre (JTIC) provides open source intelligence using data that is collected from multiple sources and double-source verified. This enables analysts to work only with those data sets that are significant and reliable in order to support, validate, and declassify proprietary and classified sources.

Our analysts, who are acutely aware of the difficulties inherent in the use of open source information, apply a rigorous methodology to the gathering and processing of open source data. This enables them to mitigate potential pitfalls, and provide assurance to our customers, that they can trust the conclusions they draw from Jane's data and insight.

Objective, impartial, and reliable insight  
from experts you can trust

# Understand the threat environment

Jane's Terrorism and Insurgency Centre saves you time in the collection, validation, verification, and interpretation of global terrorist and insurgent activity.

**Jane's provides a comprehensive big-picture view, enabling analysts to:**

- Monitor the activity of non-state actors with daily news and analysis of events
- Filter and discriminate information from noise with an event significance qualifier for each record
- Reveal otherwise obscure trends, variances, and anomalies with optimised data visualisation tools
- Gain a deep understanding of the capabilities, doctrines, and leadership of non-state armed groups
- Gain an understanding of militant groups' use of social media and propaganda, as well as its distribution and consumption patterns
- Combine JTIC data with your own data, as well as with other third-party sources. JTIC data is available in multiple formats and can be easily integrated into internal systems
- Share findings with allies and partners; there is no risk in sharing data from JTIC as we provide open source intelligence with zero classification

# Structured, consistent, comprehensive

Jane's Terrorism and Insurgency Centre is a structured, consistent, and comprehensive database of open source events related to non-state armed groups, with multiple fields of granular metadata that is updated on a daily basis. It provides insight and in-depth analysis on global topics, going beyond events to explain the context and driving forces behind global unrest, insurgency, and terrorist activities.

## **Jane's Terrorism and Insurgency Centre contains:**

- An exhaustive database of more than 410,000 terrorist and insurgent events dating back to 2009 is updated daily. Events are covered systematically using a consistent and structured methodology
- Verified and validated data on more than 350 non-state armed groups
- Qualitative analysis on events, non-state armed groups, and national terrorist and insurgent risk factors
- Militant propaganda analysis that offers technology combined with human expertise of language, subject, culture and region to provide the detailed 'so what' factor

# Bringing together key content to support your workflow

Jane's Terrorism and Insurgency Centre brings together content from Jane's defence and country risk experts to provide a solution that supports your workflow and helps you deliver a more robust intelligence product.

## Group Profiles

Incorporating detailed data and analysis, including integrated data visualisation dashboards, for more than 350 groups, Jane's Terrorism and Insurgency Centre provides you with the insight you need to develop a deep understanding of the capabilities, doctrine, and leadership of non-state armed groups operating across the globe.

Regularly updated, the group profiles provide data and analysis including:

- Executive summary
- Organisation and recruitment
- Aims and objectives
- Funding
- Areas of operation
- Propaganda
- Alliances and rivalries
- Political activities
- Operational methods
- Campaign narrative
- Leadership

# Global Events Database - Updated Daily

The events database delivers non-state armed group events data that can be viewed as a list, chart or geospatial layer that can be ingested into GIS systems for analysis and integration with related layers.

Browse and combine verified and validated metadata fields to create detailed search strings

Event	Group	Casualty	Attack	Counter Terrorism (CT)
- Event date	- Group family	- Civilians killed, wounded, or detained	- Attack scale	- Target sub sector
- Type	- Group name	- Security forces killed, wounded, or detained	- Tactic	- Target object
- Significance	- Group scope	- Suspects killed, wounded, detained	- Targets environment	- Target nation
- Region/country	- Group orientation	- Non militants killed, wounded	- Attack platform	- NSAG statement
- Province	- Group nationality	- Total killed	- Attack weapon	- NSAG medium
- Longitude	- Group role	- Total wounded	- Suicide attack	- NSAG actions type
- Latitude			- Target sector	
				- Operation type
				- Operation environment
				- CT force
				- Arms seized/destroyed
				- CT assets
				- CT statement type
				- Formal charges
				- Convictions
				- Acquittals
				- Extraditions
				- Appeals
				- Other restraining orders

# Visualisations that deliver unique insights

Quickly understand trends, reveal connections and get answers to your questions with structured, verified and validated events data. Jane's maps, charts and interactive tableau dashboards enable you to visualise and gain insights from large and complex data sets.

## Explore events and group profiles with powerful analytics

Using powerful data analytics, you can gain insight by militant group and country. Events data is updated daily, with more than 5,000 events added per month, so you can rest assured you are using up to date verified and validated connected data. Data within the dashboards can be further refined to show attacks against security forces and be exported to be added to your report.

View profiles of militant activity for the current year and five prior years. Gain insight into the most prolific militant group within your chosen country, view data by month, tactic, target, non-militants killed and weapon.

Gain an at a glance view of your selected group's activity by events, weapons, tactics and targets. The tempo of attacks by year and month and the location of the attack is also tracked.

## Identify trends and patterns in militant activity with JTIC charts

Charts enable you to gain insight into the JTIC events data. Build your own charts based on your chosen criteria to understand trends and identify patterns in military activity. Charts can be exported as PDF or image files or exported to Excel to be added to your report.

## Increase your situational awareness with mapping tools

When you view the JTIC events database as a geospatial layer you can quickly gain insight into militant activity in a country or region. Filter the data to view events by type, group, target, attack characteristics and casualties.

# News and analysis

Global news, analysis, and daily insight into terrorism and counter-terrorism events, trends, and developments are drawn from renowned Jane's national security news resources including Jane's Intelligence Weekly, Country Risk Daily Report, Terrorism & Insurgency Monitor, and Jane's Intelligence Review

# Global attack index and country briefings

The monthly global attack index provides a holistic examination of the worldwide trends in violence by non-state armed groups over the previous month to provide a global perspective.

Following this overview, the reports then focus in on a regional level to provide more nuanced analysis of key trends, events, and developments within regions and specific countries.

For each region, a country assessed as experiencing significant or notable levels of non-state armed activity is then selected, assessed, and evaluated as a country briefing by our experts.

# Jane's Militant Propaganda Analysis

Responding to quickly evolving militant communication strategies and outputs, Jane's offers a dedicated stream of analysis on the use of a broad range of social media platforms by militant groups to communicate and spread propaganda. Militant-produced content in multiple languages is assessed by our unique network of native language terrorism experts, providing comprehensive coverage and insights into issues our analysts identify and assess as being of significant analytic value.

Jane's offers ahead-of-the-curve insights on politically or ideologically motivated violence, helping you identify new trends and generate actionable intelligence to inform security assessments and broader strategic approaches to matters of countering violent extremism.

Core focus areas:

Social media narratives

Sentiment from various groups

The interpretation and understanding of militant messaging

The evolving extremist use of social media

Implications from a global perspective

# Integrate data and information quickly and easily

Jane's Terrorism and Insurgency Centre content is available in multiple formats to align with user workflows. The online database provides users with instant access to the very latest content, with new content and updates added regularly. Offline access delivers the same content via disc or ftp site in a way that enables you to integrate data and information quickly and easily into other systems, intranets, models, and simulations.
