

Crude Oil Supply Analytics

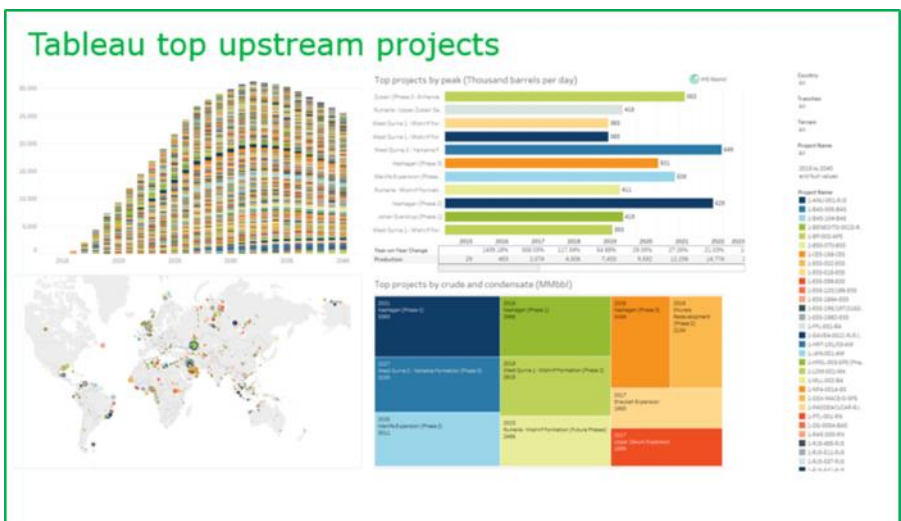

A deep-dive for global crude and condensate oil supply

As the oil production landscape continues to change, stakeholders need a comprehensive source of regional and global crude oil outlooks. The IHS Markit Crude Oil Markets (COM) service offers unique access to a combination of regularly updated datasets and outlooks including: supply, production, price, infrastructure, and economics.

The IHS Markit **Crude Oil Supply Analytics** service focuses on field-by-field breakouts from key assumptions underpinning our crude and condensate supply forecasts to more granular detail on the new source of supply. As an add-on subscription to our Crude Oil Markets, the service enhances your understanding of the latest developments in upstream projects which will impact global supply in the short and long-term. Our models provide the ability to analyze and compare the breakeven economics of both unconventional and conventional supply.

Key Research Questions

- What makes up the global base declines? Can this be broken down by major complex, basin, field or conventional/unconventional?
- What are your key assumptions and above ground risks underpinning the supply forecasts?
- What are the breakeven price ranges used for the new source projects?
- What is the project build-up behind sanctioned and unsanctioned wedge?
- Is there a crude stream build-up by field with API gravity?
- What is the U.S. unconventional new source production by major sub plays by breakeven tranches?

How do our clients use this service?

Whether you represent an operator, a government body, an equipment supplier, a transport company, or an investor, Crude Oil Supply Analytics service helps you to evaluate risks and rewards, and informs your strategic planning, trading, and investment decisions.
