

# Introducing IHS BOM Intelligence<sup>SM</sup>

Go beyond managing your BOM.

Ascend to a higher level of BOM Intelligence.

You need to keep pace and compete in the most intense, unforgiving and ever-changing ecosystem in the business world. With IHS BOM Intelligence, the next generation of bill-of-materials analysis is here.

As the world's first intuitive, comprehensive and automated bill-of-materials analysis system, IHS BOM Intelligence enables organizations to keep pace with new product innovation, avoid costly supply chain disruptions and product redesigns due to parts obsolescence, and keep pace with evolving compliance regulations. Backed by the largest database of electronic parts components in the world, with nearly 500 million components, IHS BOM Intelligence proficiently links information, people and processes to more intelligently manage your electronic component supply chain.

IHS BOM Intelligence helps you proactively manage component obsolescence and compliance and extended supply chains as well as isolates "at-risk" components throughout the entire product cycle. This eliminates redundancy, avoids excess inventories and component shortages and reduces the risks of using counterfeit parts, helping you to meet production targets while managing costs effectively. In addition, our industry-leading alert notification system helps you build a competitive advantage by identifying key component part changes that can affect designs, sources and even margins to drive differentiation, market share and commercial prosperity

IHS BOM Intelligence is a replacement for BOM Manager, with all of its features and capabilities, includes enhanced functionality, such as:

- **BOM Dashboard** – an interactive visual summary of the health of your BOM.
- **1-Step BOM Import** – simplifying the steps required to load a BOM into the system.
- **Context-Sensitive Help** – on-screen access to the help topics specific to the actions you are performing.
- **Simple Search Panel** – available on every screen, letting you research parts at any step.
- **The New MegaNav** – from which you can access all BOM Intelligence functions.
- **Simplified Reporting** – generate and create reports in a simple, intuitive workflow.
- **Workspace** – store and quickly retrieve BOMs and parts you are currently working on, with a single click.
