

MarkitSERV FX: Execution connectivity

Enhance your post trade processes and workflow management with connectivity between trading venues and customers.

MarkitSERV FX offers connectivity to route post trade messages from execution venues directly into your post trade environment.

1,500+

active customer connections

90

vendors connected

Trade data can be enriched and delivered in your required format/protocol for seamless integration into downstream systems.

Electronic trading and automated execution strategies have drastically increased the volume of FX tickets, and new complex regulation for reporting has created more complicated FX trade processing challenges for all participants through the trade lifecycle. Combined with an increasing emphasis on risk control, this means it is more important than ever to have positions reflected in participants' own systems as soon as trades have been executed. Therefore notifications are required electronically in realtime from a reliable platform.

Markit provides industry leading technology to FX market participants by managing and streamlining multiple post trade processes within a platform built on MarkitSERV's proven infrastructure. By taking a collaborative approach to post trade efficiency, Markit works with other solution providers to add further value to your post trade processing environment.

Clients

- Banks
- Buyside firms
- Clearinghouses
- Corporates
- Dealers / Interdealer brokers
- ECNs
- Exchanges
- Prime brokers
- Swap execution facilities (SEFs)

Flexibility

A scalable and modular approach to service delivery ensures that the solution can adapt and grow to meet evolving requirements.
