

WSO Software - Cloud Solution

Efficient, scalable hosted portfolio administration for loans, credit and fixed income

Portfolio administration for complex assets requires flexibility, reliability and security. Firms are under increasing pressure to meet these operational requirements while also working with maximum efficiency.

Our hosting services for WSO Software provide an efficient, cost-effective and scalable way to implement our software without upfront investment in IT infrastructure. The solution is continuously updated as new features become available, eliminating the need for manual upgrades, providing the fastest access to enhanced functionality.

Our cloud solution includes all of the features and modular capabilities of WSO Software and enables our clients to focus on their operations, reporting and risk management instead of software maintenance. It provides a single platform with functionality for performance analysis, compliance, accounting, reporting, and system integration. WSO's highly customizable features give it capabilities for a broad range of asset classes, with many powerful features for leveraged and syndicated loans.

Our cloud solutions are built on the leading cloud services of Amazon Web Services (AWS). The underlying AWS infrastructure provides maximum scalability for clients on a trusted cloud computing platform.

Scalability

Environment elasticity enables auto-scaling based on peak times and growth, while enabling cost optimization of hardware in off-peak usage. Web-based access via AWS AppStream2 allows remote access flexibility for users.

Reliability

Deploying our application active-active across AWS' multiple availability zones provides higher uptime percentages than traditional single data center deployments, reducing failure and outages.

Efficiency

Hosted software eliminates gaps in versions, which traditionally cause risky and expensive upgrade projects, and provides enhanced, real-time access to troubleshooting

Security

We use proven threat monitoring and detection tools to enhance data security.

Quick access to product enhancements

Get faster access to new business functionality with shorter waiting periods between initial design collaboration and the final rollout of new features. Feature toggles give you flexibility in testing and implementing new capabilities.

Automation and standardization

Infrastructure automation and automated code deployments create a consistent environment where all clients are able to take advantage of the latest enhancements.

CUSTOMERS

Asset managers

Hedge funds

Banks

Insurance agencies

Private equity funds
